Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Plays a role as a receptor for the recognition of MHC class I HLA-E molecules by NK cells and some cytotoxic T-cells.
-!- SUBUNIT: Can form disulfide-bonded heterodimer with NKG2 family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          --- SUBCELLULAR LOCATION: Type II membrane protein.

-!- FUNCTION: Binds to platelet glycoprotein Ib and enhances platelet aggregation at low-shear stress. At high-shear stress, aggregation is inhibited.
                                                                                                                                                                                                                                                                    SEQUENCE FROM N.A., SEQUENCE OF 22-58, SUBUNIT, AND MASS SPECTROMETRY.

Biochemistry 38:7584-7593(1999)
-!- FUNCTION: A potent inhibitor of collagen-induced platelet aggregation. Individually, neither subunit inhibits platelet aggregation. Both subunits are essential.
-!- SUBUNIT: Heterodimer of one alpha and one beta subunit held together by noncovalent interactions rather than by intersubunit disulfide bridges.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Structure 10:943-950(2002).

-!- FUNCTION: Two-chain botrocetin forms an activated complex with vWF, and the complex then binds to platelet GPID, resulting in platelet agglutination.

CC -!- FUNCTION: There are two distinct forms of the von Willebrand factor-dependent platelet coagglutinin. The dimeric form is determined to platelets of a submitted in promoting vWF binding to platelets.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Disulfide-linked dimer of an alpha and a beta chain.

CC -!- SUBGNIT: Contains 1 C-type lectin family domain.

Pharmaceutical composition for treating tumor by stimulating cytotoxic activity of natural killer cell or T-cell, comprises an agent that binds to mast cell function-associated antigen ligand on target cell.

Example 1; Page 19; 49pp; English.

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (WAFA) ligand on a target cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical

combination with the MAFA to prevent inflammatory and allergic reactions

composition in vitro, ex vivo or in vivo by administering the composition an amount sufficient to inhibit cell surface MRFA binding to the ligand on the target cell. The agent or the composition is useful for treating a tummour by stimulating the cytotoxic activity of an NK cell or a cytotoxic activity of an NK cell or a cytotoxic tummour cell. The invention is also useful for inhibiting an activity of NK cell or a cytotoxic activity of an NK cell or a cytotoxic tummour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell craw.
                                                                                                                                                                                                                                                                  120

Example 1; Page 19; 49pp; English.

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (MAPA) ligand on a target cell, and prevents or inhibits natural killer (NK) or T-cell-expressed cell surface MAPA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAPA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition

```
to the subject, to NK or T-cell or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface MAPA binding to the ligand on the target cell. The agent or the composition is useful for treating a tumour by stimulating the cytotoxic activity of an NK cell for a cytotoxic tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is rat MAPA protein
                                                                                                                                                                                                                                                                                            CCGSKDSTCSHCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQGVK 120

useful for prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A soluble form of mast cell function-associated antigen (MAFA) can be produced by recombinant techniques for use in the ligand- screening assay. The ligands that are identified may be used alone or in combination with the MAFA to prevent inflammatory and allergic reactions

This sequence can be used in a method resulting in the production of recombinant protein expressed by NK and T cells, which may inhibit cell-mediated cytotoxicity, e.g. in transplant rejection or autoimmune diseases, or may be used to produce antibodies for diagnostic or therapeutic use
                                                                                                                                                                                                                                                                                                                                        Kp43; human; natural killer cell surface antigen; NK; T cell; inhibitor; cell-mediated cytotoxicity; transplant rejection; autoimmune disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide having a sequence corresponding to human mast cell function-associated antigen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic diseases, and tumour growth.
                                                                                              134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of human mast cell function- associated antigen (MAFA) splice variant huMAFA(E3/4-), which lacks the C-lectin-like domain of human MAFA (see AAMP8265) but retains the intracellular and transmembrane domains as well as the extracellular C-terminal tail. Truncated MAFA polypeptides including huMAFA(E3/4-), and polynucleotides encoding them, as well as synthetic peptides (see AAW88258-64, AAW88268-72), can be used be used in compositions for the treatment of inflammatory and allergic diseases (e.g. rheumatoid arthritis and asthma), or tumour growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

The type II integral membrane proteins (AAW40219-W40221) and CD94 (AAW40222) form a group which has 20% homology with the human macrophage antigen (TMAH) (AAW40215). The homology which TWAH shares with this group includes a series of disulphide residues. The structural homology between the peptides provides information on the structural and physical properties of both the TMAH gene and protein. This is used in the development of TWAH as a disapnostic tool and as a method of treating diseases associated with expression of TWAH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 71 NCYFISSEOKTWNESRHLCASOKSSLLOLONTDELDFMSS--SQOFYWIGLSYSEEHTAW 128

The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of screening several molecules or compounds to identify a ligand which specifically binds a cDNA. A protein encoded by the cDNA is useful for a high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific linding, and detecting specific binding between the protein and a molecule or compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and conditions to allow differential gene expression, can be used in gene therapy, to formulate prognosis and to design a treatment regimen and to monitor the efficacy of treatment. The present sequence represents the amino acid is sequence of a protein encoded by a cDNA differentially expressed in a

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynuclaotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunoomodulatory activity and activity, rissue growth factor activity, immunoomodulatory activity and activity, or activity, immunoomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding polypeptides with cytokine-like activities, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    70 SHCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQCVKLFGEYLGQD 129

The invention relates to an isolated polymucleotide encoding a cytokine or cell proliferation/differentiation-related protein (or the mature protein or active domain, sequences greater than 9% identical to it or sequences complementary to it. Also included are the encoded proteins, expression vectors, transformed host cells, antibodies, and identifying a compound that binds to the polymptide They are particularly useful therapeutic, diagnostic or research methods. They are particularly useful therapeutic, diagnostic or research methods. They are particularly useful thrombocytopaenia, osteoporosis, osteoarthritis, inflammations, ulcers, alzheimer's disease, Parkinson's disease, Huntington's disease, thrombocytopaenia, osteoporosis, osteoarthritis, inflammations, amount of a myotrophic lateral sclerosis, stroke, immune deficiencies (e.g. human immunodeficiency virus (HTV), severe combined immunodeficiency or infections), autoimmune disorders (e.g. rheumatoid arthritis, Guillain-Barre syndrome or graft-versus-host disease), cancers (e.g. thyroid cancer, lung cancers, small cell carcinoma, Kaposi's sarcoma, brain tumours, prostate cancer, ovarian cancer or leukaemias), or inflammatory disorders (e.g. rheum cancer or leukaemias), or inflammatory disorders (e.g. rheumacor). 'n,
           production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy, The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

                                    This sequence represents a novel secreted protein, G52-24, isolated from a clone, G52-24 (ATCC 98028), derived from a human PBMC cDNA library. The nucleic acid and encoded G52-24 secreted protein can be used for research purposes (as markers for tissues, molecular weight markers for gels, primers, probes, etc.), for nutrition (as C, N or carbohydrate source), as a cytokine for cell proliferation and differentiation activity, as immune stimulatts or suppressors e.g. for viral, bacterial or fungal infections, for autoimmune diseases such as multiple sclerosis or

The invention relates to a protein comprising fully defined AZ302 I

C protein or BD127 1 6 protein. The polynucleotides are useful for

C expressing recombinant proteins for analysis and are also useful as

C chromosome markers or tags to identify chromosomes or to map related gene

C chromosome markers or tags to identify chromosomes or to map related gene

CC constitues. The proteins are useful as amino acid supplement, carbon

Source, nitrogen source and carbohydrate source. The proteins are useful

CC combined immunodeficiency (SCID); autoimmune disorders (e.g. severe

CC combined immunodeficiency (SCID); autoimmune disorders (e.g. multiple

CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,

CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,

CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,

CC osteoporosis or osteoarthritis, peripheral nervous system disease),

CC peripheral neuropathy, Alzheimer's disease, Parkinson's disease),

CC coagulation disorders; inflammatory diseases (e.g. systemic inflammatory

CC reponse syndrome (SIRS), ischaemia-reperfusion injury, Crobn's disease),

CC canpulation immunity, for inducing bone, cartilage, tendon, ligament and/or

CC repenrating nerve and brain tissue, for inducing fertility and for

CC inhibiting tumour growth. Proteins are also useful as othendrine for

CC inhibiting tumour growth. Proteins are also useful as achemokine for

CC inhibiting tumour growth. Proteins are also useful as achemokine for

CC inhibiting tumour growth. Proteins are also useful as achemokine for

CC inhibiting tumour growth. Proteins are also useful as achemokine for

CC inhibiting tumour growth for present and also

CC inhibiting tumour growth for present and also

CC sequence represents the amino acid sequence of a human secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ---PA 148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         88 SSORFCDSODADLAQVESFOELNFLLRYKGPSDHWIGLSREOGOPWKWINGTEWTROFPI 147

                                                                                                                                                                                                                                                                     02-AUG-2001
```

```
The invention relates to isolated nucleic acid molecules encoding novel.

human secreted extracellular matrix proteins (SPS). The polymucleotides
and proteins are used to prevent, treat a medical condition in e.g.

thumans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For
example, disorders associated with decreased expression of SPS. The SP
polymucleotide or a vector expressing them may be administered to treat
diseases by gene therapy. Antisense molecules may be administered to down
regulate expression of SPS by binding with the cells own genes and
probes in diagnostic assays. The SPS may also be used as DNA
probes in diagnostic assays. The SPS may also be used as DNA
probes in diagnostic assays. The SPS may also be used to
produce antibodies and to identify modulators (agonists and antagonists)
of the SPS. The anti-(SP) antibodies and antagonists and she antipodies and activity of SP and as diagnostic agents for
down regulate expression and activity of SP and as disorates include for
cample immune/autonimmune diseases (e.g. HIV (human immunodeficiency
virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis),
cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of
the breast or liver, Sezary syndrome and Gaucher's disease), neurological
diseases (e.g. Alzheimer's disease, Parkinson's disease), neurological
concers and subscretus (e.g. cardiac arrest, tachycardia and andisorders
concers and bycertions, viruses and fungi and ocular disorders
concers and bycertions. Other uses include wound healing, maintenance
cof organs before transplantation, support of cell culture of primary
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecules encoding human secreted extracellular matrix proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20;
